

WHEAT

PLANT ADVANTAGE™

Soil-Set®, Grain-Set®, Scyon® and Liqui-Plex® Bonder work together to give wheat an advantage for higher productivity, biomass and yield.

SOIL HEALTH

Use **Soil-Set** to:

- Increase populations of beneficial microbes to outcompete pathogens in the soil.
- Maximize nutrients available to the plant.
- Improve residue breakdown and soil organic matter.

CROP DEVELOPMENT

Use **Grain-Set** to:

- Promote strong plant growth, including root development, for more nutrient access and a stronger stalk.
- Stimulate chlorophyll production to increase crop quality and yield.

CROP DEFENSE

Use **Scyon** to:

- Improve nutrient uptake, transport, storage and mobilization through a combination of six metabolites.
- Elevate photosynthetic activity for additional plant productivity.
- Bolster plant vitality in the face of biotic and abiotic stressors.

AMINO ACIDS

Use **Liqui-Plex Bonder** to:

- Provide a natural, balanced source of 18 essential amino acids.
- Improve chlorophyll production and photosynthetic activity.
- Optimize wheat performance during critical growth stages.

Winter wheat showed optimal response when **Grain-Set** and **Soil-Set** were applied at Feekes 4 and 9.5.

Grain-Set Effects on Winter Wheat Yield

Scyon delivered consistent performance across a variety of environments and practices.

The Effects of Scyon and Fungicide in Wheat

Trial conducted by Dr. T McCabe, University College Dublin

In this trial, **Scyon** was applied late at Feekes 9 instead of at the recommended Feekes 5-7.

The Effects of Scyon on Western US Wheat

Trial conducted in Bonners Ferry, Idaho

SCIENCE-BASED SUPERIORITY

In contrast to live microbial products, which require fostering a viable culture in precise environmental conditions, our products use the beneficial metabolites produced by microbes – not the microbes themselves. The result is a consistent, effective product every time.

About fermentation and metabolite technology

Many of HELM’s Plant Advantage™ products are built on a foundation of fermentation-based metabolites. These metabolites have a beneficial effect on soil and crops. They won’t feed harmful microbes or pathogens and, in many cases, will outcompete pathogens to reduce plant stress.

Where our fermentation- and metabolite-based products win:

- Stable and stand up to most on-farm storage conditions.
- Can be stored for multiple growing seasons without compromising quality.
- Compatible with most tank mix chemicals.
- Produced in a laboratory setting for high precision, uniformity and consistency with every batch.
